

OUR BAMBOO FLOORS ARE GREENER THAN MOST

Here's why:

► Glues *

Glues from Scandinavia are low VOC and easily beat the CARB Phase 1&2 and European E-Zero emissions standards. Our Composite bamboo flooring in our ECO-series contains zero formaldehyde. **NADURRA®** bamboo is tested in independent Canadian laboratories.

► Finishes & Stains *

Created by German manufacturer Treffert®, they are water-based and UV-cured on the product. The finishes contain zero solvents and exceed the extremely stringent European E-Zero emissions standards.

► FSC certification *

Forest Stewardship Council (FSC) certification ensures that the bamboo has come from a forest that is environmentally well managed with socially fair practices. Examples are : protection of endangered plants and animals habitat, protection of water resources, proper tree rotation, use of low impact forestry, low use of chemicals, protection of workers right to unionize, and stewarding of the surrounding community's long-term economic wellbeing. FSC is the most respected third-party forestry certifying body in the world today.

► Manufacturing controls *

ISO certified factories : ISO 14001 for environmental management and ISO 9001 for quality management

► Company Policy

Since 1994, people in our company have had a commitment to selling environmentally-responsible flooring options like bamboo flooring. Since the early 2000's, we have used environmentally-friendly office supplies (like FSC-certified paper and card stock), purchased wind-powered electricity to run our operations, filled our vehicles with Eco-Logo certified gas and donated flooring to Habitat for Humanity. We live it every day.

** These are for our ECO line only, which are tested for formaldehyde content in independent laboratories in Canada. We do not test for emissions on our REGULAR line.*
